

The ground floor of this end of terrace house was not working, with a dark, central reception room and small dining room to the rear with a tiny inadequate kitchen extension that overheated in summer and was cold in winter.

The solution was to demolish the kitchen extension and the wall between it and the dining room, then to open up the central room to the front and back. The new kitchen was then installed in the central room at the heart of the ground floor.

The extension was then rebuilt with a large skylight and to the rear a sliding folding glazed screen was installed opening fully onto the small garden.

The garden area was designed to compliment the inside space, and together they offer a large light and open family space.
